Driven DevOps Engineer & CS Graduate focused on accelerating delivery cycles and hardening system security. Currently contributing to SkyIT Services by automating CI/CD pipelines and managing scalable cloud infrastructure. I bring a security-first mindset to DevOps (DevSecOps) to ensure that rapid deployment never comes at the cost of data integrity or system stability.

Projects

Responder Ready

Jan 2026

Full stack web application for First Responders and Fire fighters. Designed to help them manage their Psychological Health through Interactive Modules, Reaction based games, Psychological Assessments, track their sleep schedule and mood log.

- Engineered a dynamic content management system using PDF2JSON library, allowing admins to upload PDFs that automatically parse into interactive, slide-based learning modules on the user homepage.
- Architected and optimized relational database schemas in MySQL, redesigning core tables to improve data integrity and support scalable feature expansion for user progress tracking
- Developed a secure password recovery system integrated with Brevo API for automated email delivery, ensuring reliable user authentication and account security.
- Modernized the Admin Dashboard UI, improving the layout for better data visualization and administrative workflow efficiency using Bootstrap and custom CSS3
- Integrated Frontend-backend communication via RESTful APIs to handle sensitive data securely, focusing on real-time feedback and privacy compliant storage.

Course Management Dashboard

May 2025

Web-based dashboard for Professors that can manage course content, student's feedbacks and students can manage enrolled courses and leave feedback for Professors.

- Collaborated with a team of 2 on Front end development using HTML, CSS, Javascript, and Bootstrap to create a visually appealing, responsive, and accessible dashboard where professors can manage courses, enroll students, and view students feedback, and students can manage enrolled courses and leave feedback for professors, with robust email/password validation for secure login.
- Contributed to back-end development with a team of 4 using Node.js, Express, and MariaDB to enable professors to add, manage courses, enroll students, and create student reviews.

Certifications

Foundations of Git

Sep 2023 - Sep 2023

GitKraken

DevOps Foundations

Oct 2023 - Oct 2023

LinkedIn

Skills

Teamwork, Problem-solving, Communication, Time management, Critical thinking, Multitasking

Technical Skills:

C++, JavaScript, HTML/CSS, Bash, Python, Linux, VirtualBox, Node.js, Express, Bootstrap, MySQL/MariaDB, MongoDB, RESTful API, GCP, CI/CD, Git/GitHub Actions, postman, Docker

Education

Tennessee Technological University

BS, Computer Science with a concentration in Cybersecurity | GPA: 3.63

Cookeville, TN

Aug 2022 - May 2026
